Senku User Guide

Strength · Energy · Nutrition · Knowledge · Utility

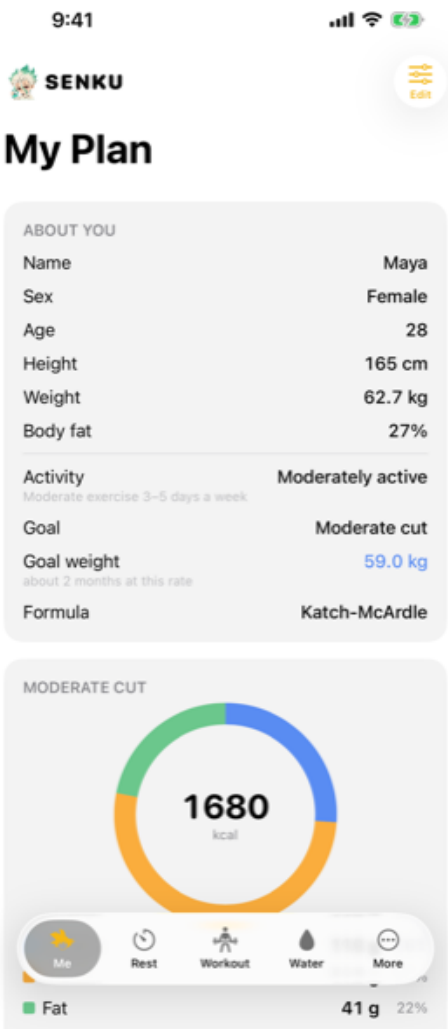

A personal fitness app for iPhone and Apple Watch. Tracks workouts, water, food, weight and more — all offline, no account, no cloud. Version 1.1.

1. Navigation

Five tabs along the bottom of the screen:

Tab	Purpose
Me	Profile, macros, body composition
Rest	Rest timer between sets
Workout	Weekly plan, exercise logging
Water	Water intake, creatine tracking
More	Weight, Food, PRs, Watchlist, Dues

2. Me — Your Plan

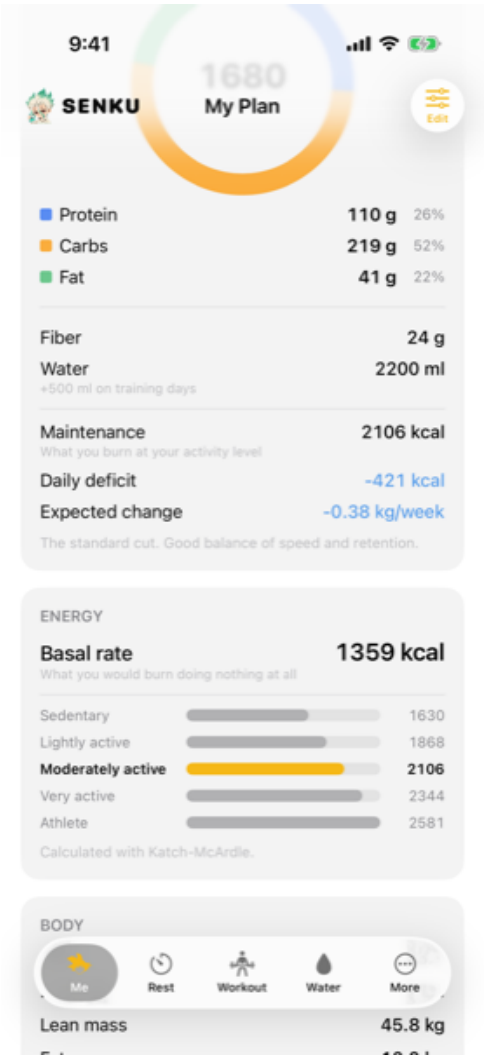

Profile and calorie target

Your profile and nutrition plan. Shows **name, sex, age, height, weight, body fat**, **activity level**, **goal** (maintain / cut / bulk), **goal weight** and **formula** (Mifflin-St Jeor or Katch-McArdle).

A calorie ring displays your daily target (e.g. 1680 kcal) with protein, carbs and fat in grams and percentages. Tap **Edit** to change any value; the plan recalculates immediately.

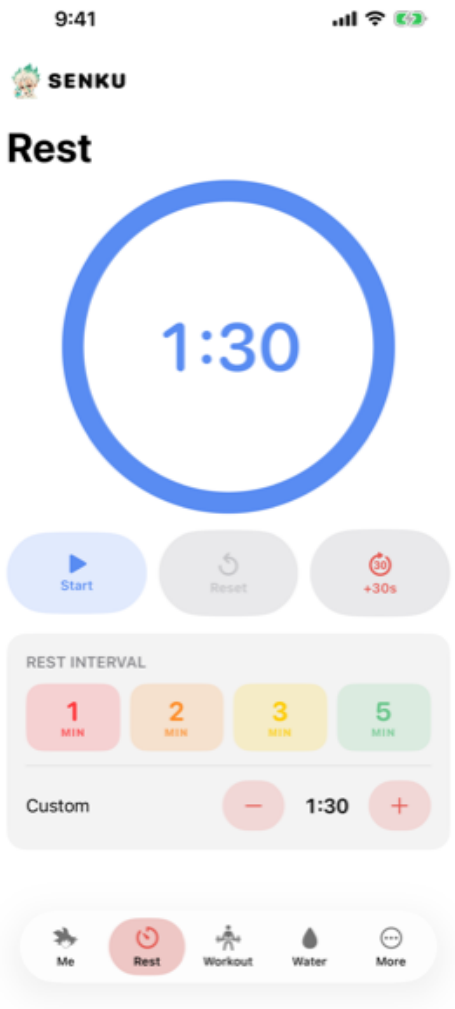

Details (scroll down)

Macros, energy and body composition

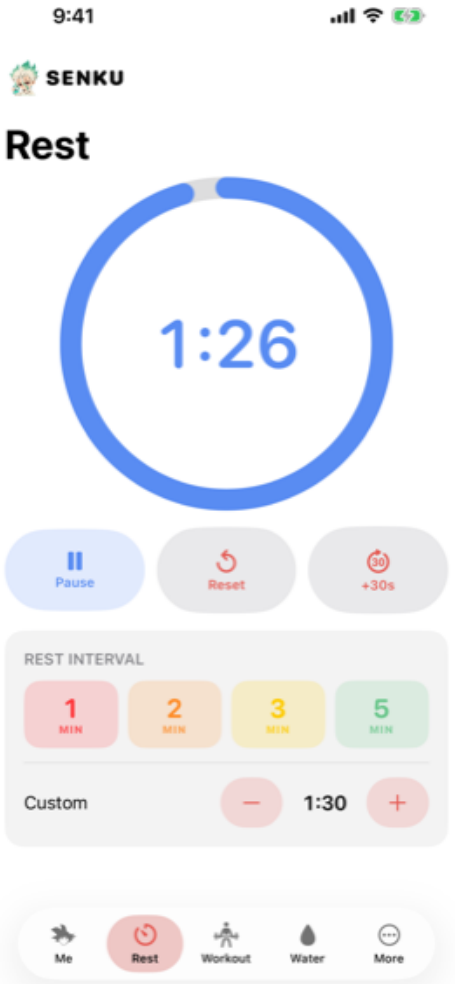

Below the ring: **fiber** and **water** targets, **maintenance calories**, **daily deficit/surplus**, **expected weekly change**, **basal rate** across activity levels, and **lean/fat mass** breakdown.

3. Rest — The Timer

Rest timer — idle

A countdown timer for rest between sets. Pick a preset (**1**, **2**, **3** or **5 min**) or use **Custom** (−/+ in 15 s steps).

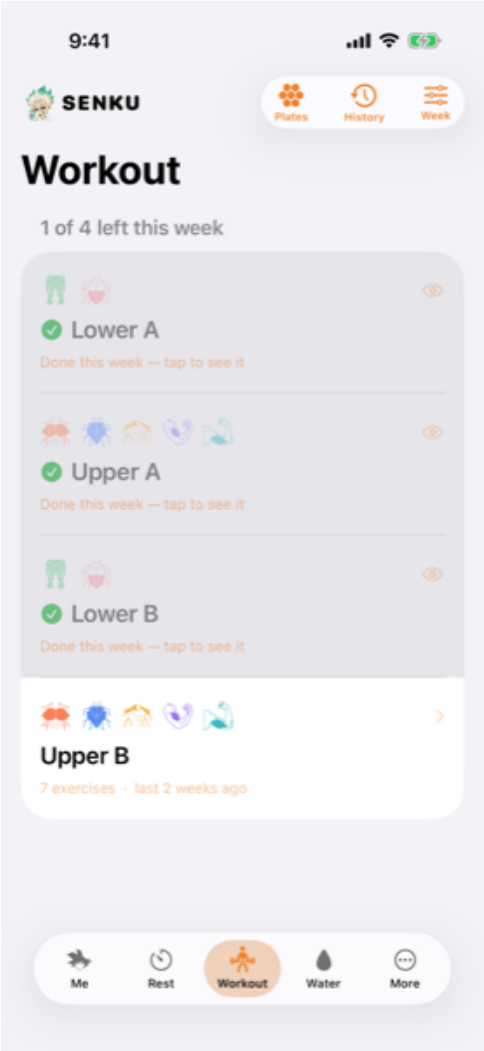

Timer running

Tap **Start** to begin. While running: **Pause**, **Reset**, or **+30s**. At zero a chime plays with a haptic tap.

Also runs as a **Live Activity** on the lock screen and Dynamic Island. The background notification chime does not double up with the in-app sound.

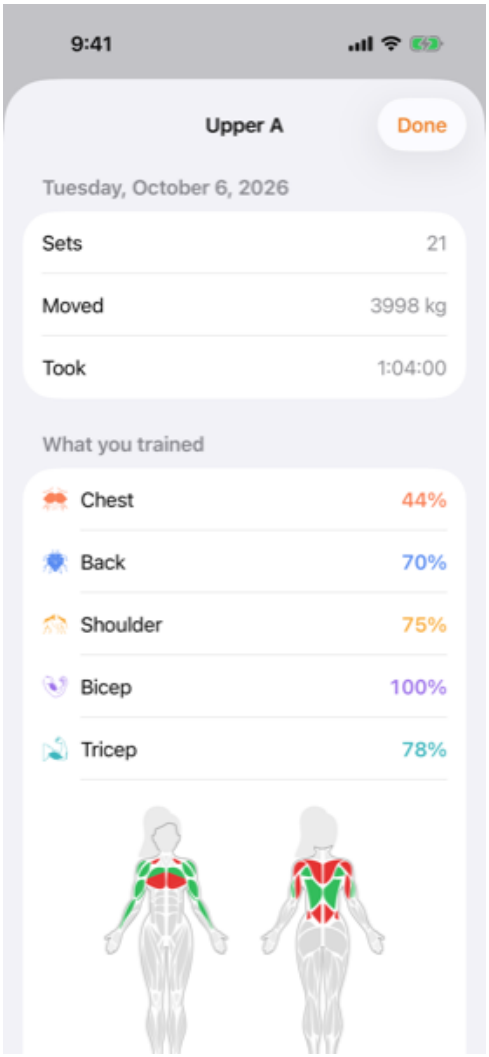

4. Workout — Your Week

Weekly training plan

Each session card shows a **green check** if done this week, the **session name**, **muscle icons**, exercise count and last-done date. Top-right: **Plates** (barbell calculator), **History**, **Week** summary. Tap **Edit my week** to rearrange, rename or add sessions.

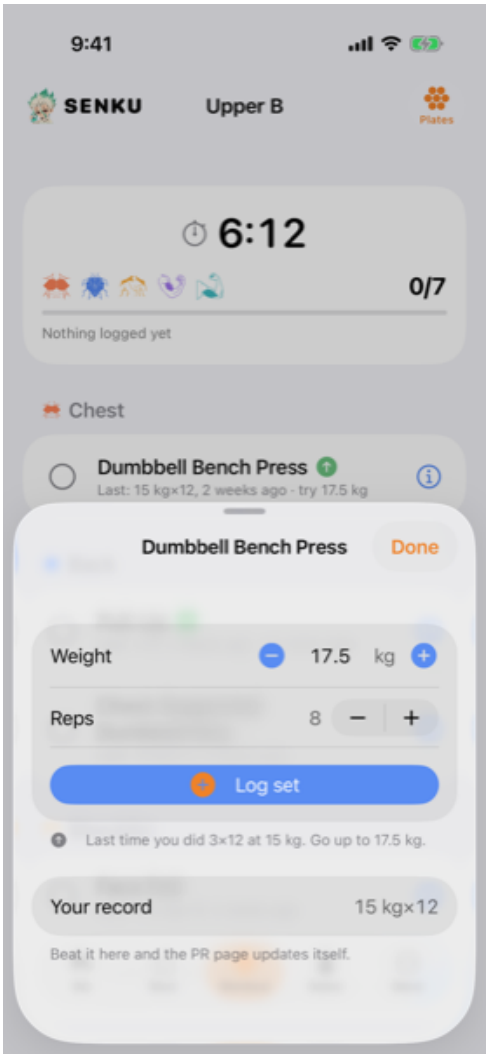

Inside a session

Session summary with body map

Shows **total sets**, **weight moved**, **time**, muscle group breakdown with weekly-volume percentages, and a heat-coloured **body map**.

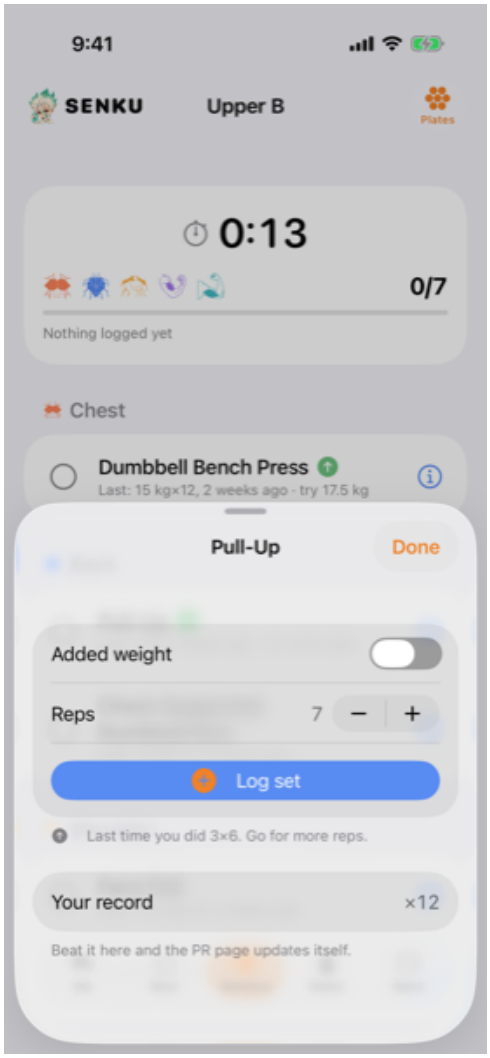

Weighted exercises

Set logger — weighted

Tap an exercise to log sets. Adjust **weight** (kg) and **reps** with −/+ or type directly. Shows your **last performance** with a suggestion and your **personal record** — beat it here and the PRs page updates.

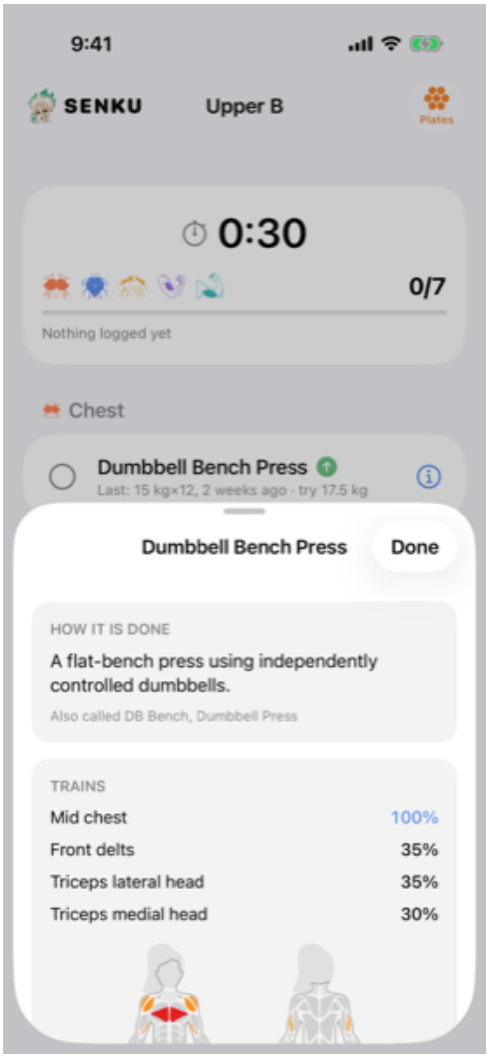

Bodyweight exercises

Set logger — bodyweight

For bodyweight exercises (e.g. Pull-Up): an **Added weight** toggle enables logging extra weight (belt/vest). When off, no weight is saved — only reps.

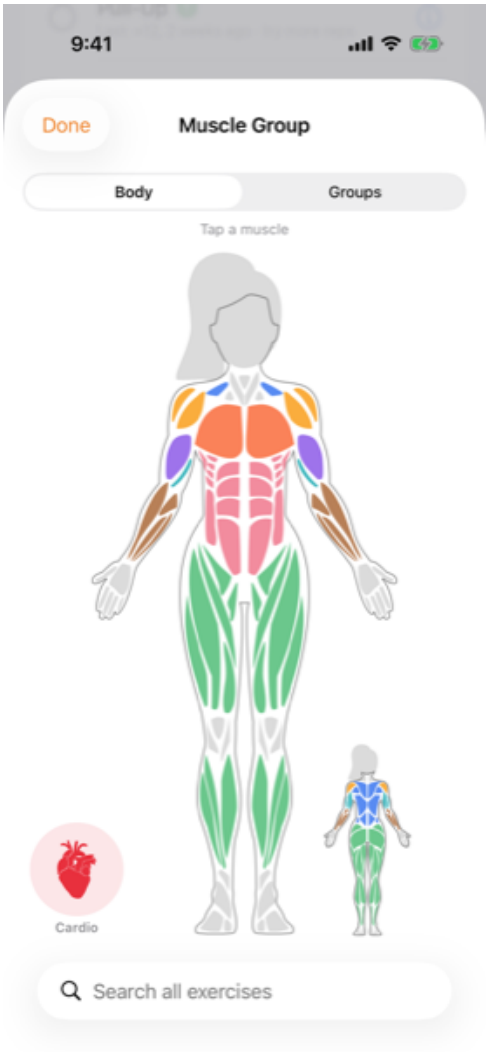

Exercise info

Exercise info sheet

Tap the info button ( ) to see **how it is done**, **alternative names**, and **muscles trained** with targeting percentages.

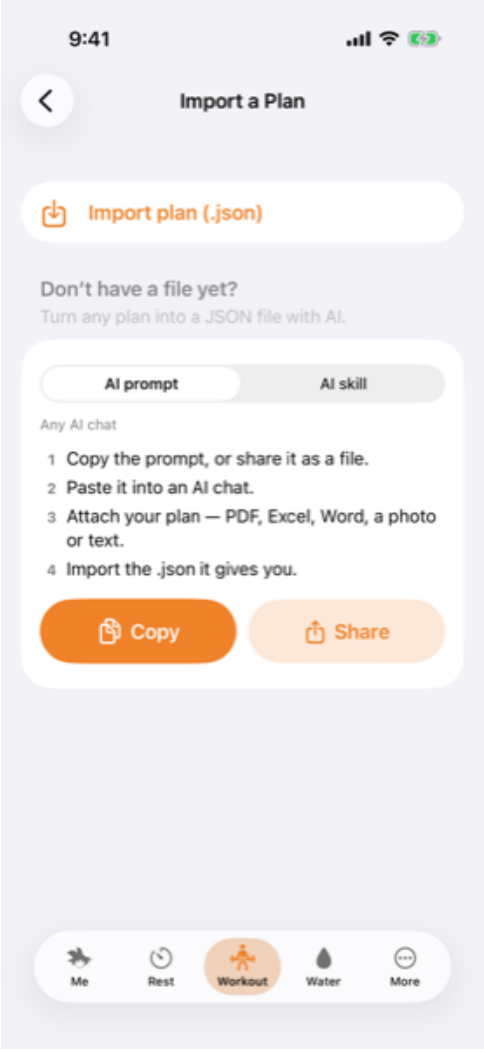

Exercise picker

Browse by body map or search

Tap **Add an exercise** to browse 162 exercises by **body map** (tap a muscle), **Groups** (list view), **Search** (by name), or **Cardio** (heart icon).

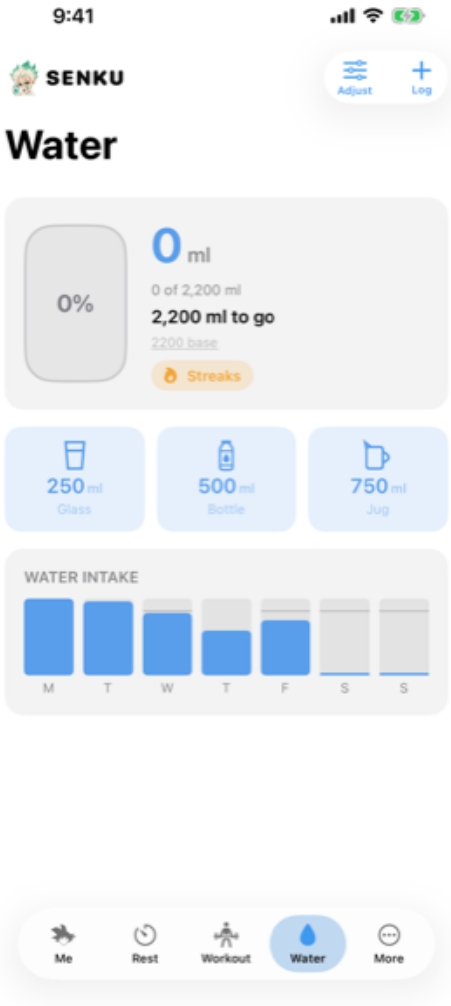

Importing a plan

Import from JSON or AI

Tap **Import a plan** from the week editor. Without a file: copy the built-in AI prompt, paste into any AI chat with your plan (PDF/Excel/Word/photo), and import the `.json` it produces.

5. Water

Water intake and weekly chart

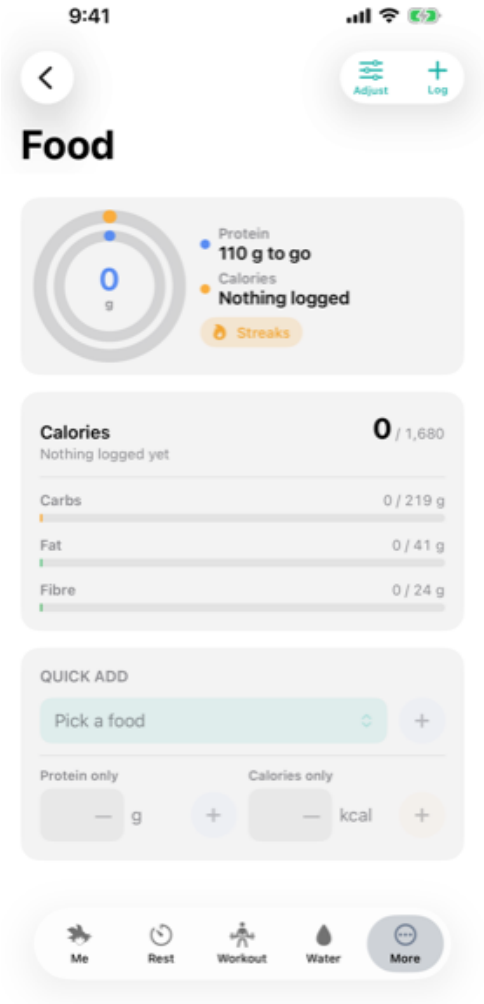

Tracks daily water intake. A **progress bubble** shows amount, percentage and what is left. Three quick-add buttons: **250 ml**, **500 ml**, **750 ml**. A **weekly chart** shows daily intake as bars.

Top-right: **Adjust** (target, creatine) and **Log** (custom amount).

Creatine & Streaks

Below the chart, a **creatine toggle** tracks daily creatine intake. Scroll further to see **streaks** — consecutive days hitting your water target and taking creatine.

6. Food

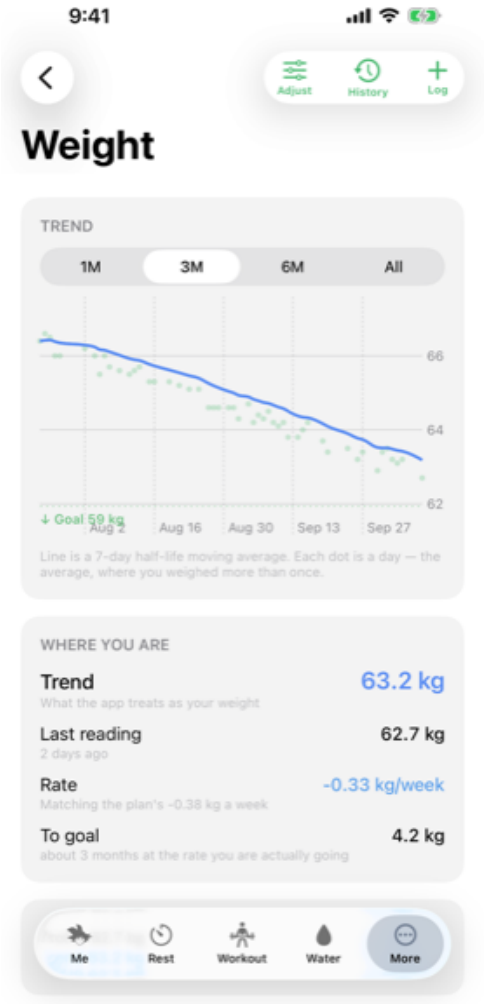

Daily nutrition tracking

Tracks daily nutrition against your plan. Shows a **protein ring**, **calorie status**, **macro breakdown** (calories, carbs, fat, fiber as current / target), and a **Quick Add** section to search foods or add protein-only / calorie-only entries.

Top-right: **Adjust** (targets) and **Log** (full entry with all macros).

7. Weight

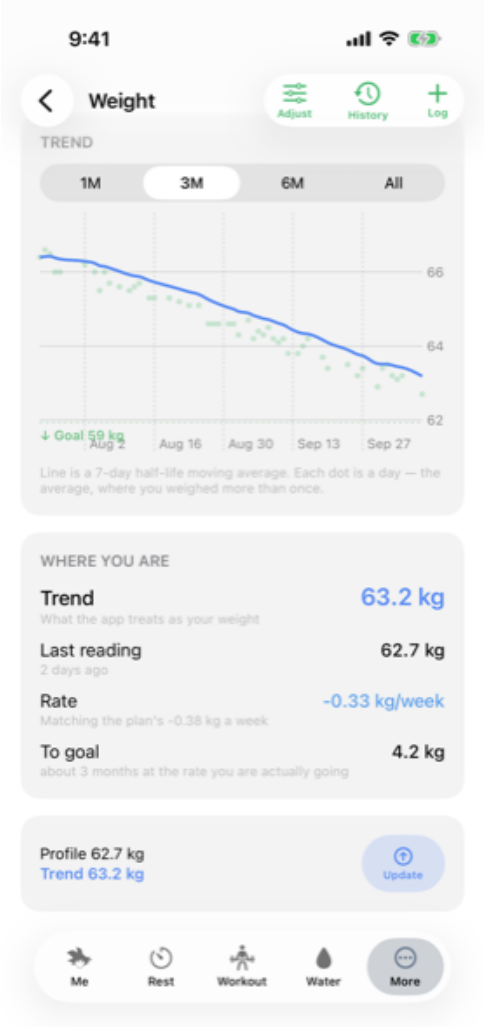

Trend chart and status

Tracks body weight with a **7-day half-life moving average** (smooth line) and individual dots. Toggle **1M/3M/6M/All**. Goal weight shown as a green dashed line.

Where you are: trend weight, last reading, rate of change (vs. plan), and distance to goal.

Logging & profile sync

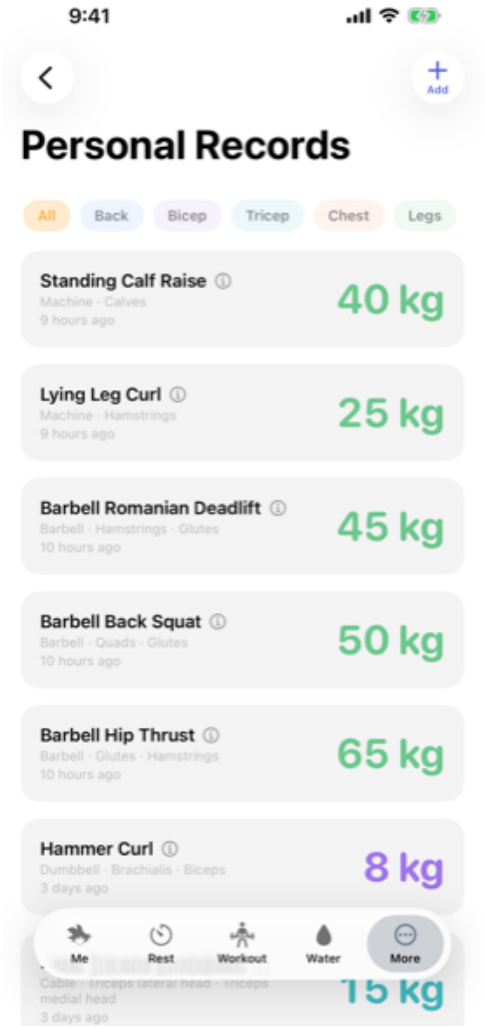

Update prompt when profile diverges

Tap **Log** to add today's weight, **History** for past entries, **Adjust** for goal weight. If the trend diverges from your profile, an **Update** prompt keeps your calorie plan in sync.

Reminders

Enable in **Settings** → **Weight**. Rings at 10:00 each morning, skips days already weighed in.

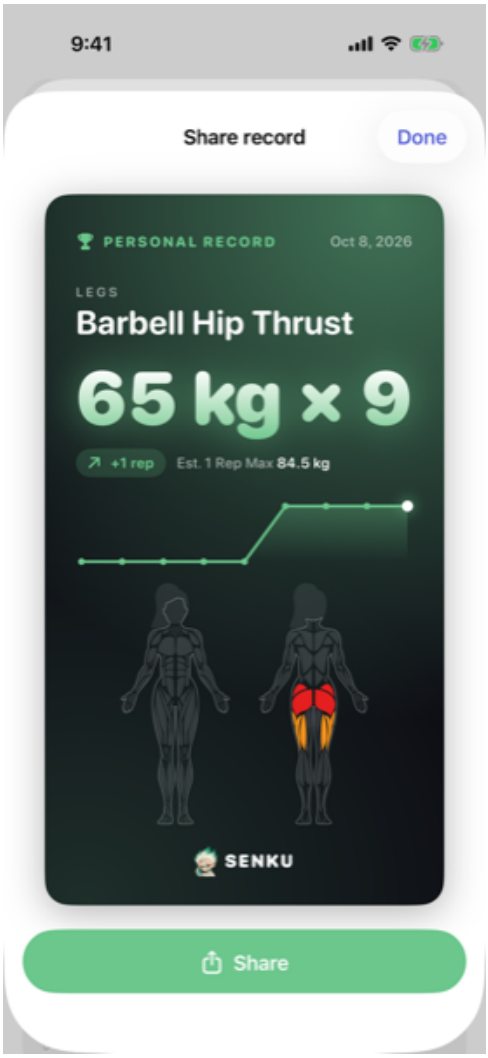

8. Personal Records

PRs filtered by muscle group

Lists personal records for every logged exercise. Filter by muscle group chips. Each row shows exercise name, equipment, time since set, and weight. Tap **Add** to enter a record manually.

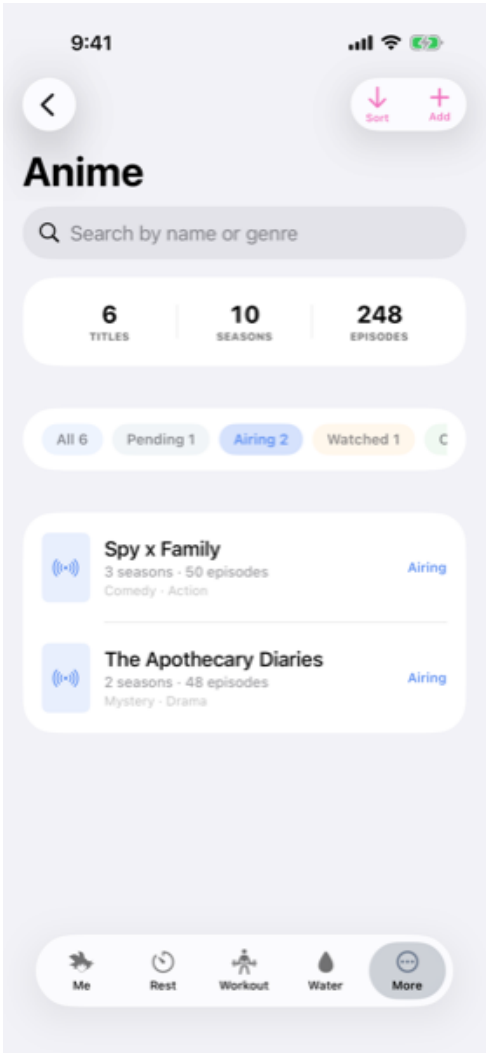

Sharing

Share card with body map

Tap a record → **Share this record** to generate a card with exercise, weight×reps, improvement, **estimated 1RM**, progress chart and body map.

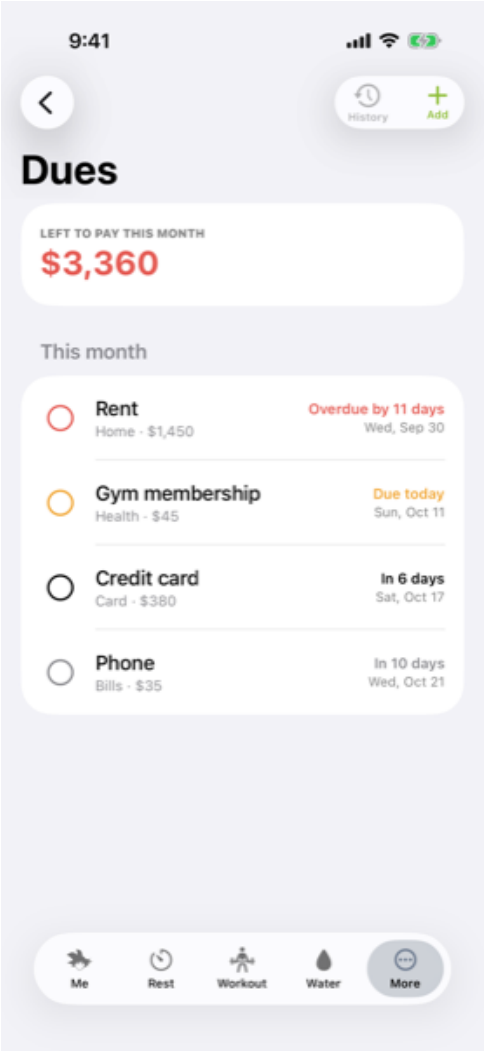

9. Watchlist

Watchlist with filters

Tracks shows, films or series. Name defaults to “Watchlist” — rename in the tab bar editor (Anime, K-Dramas, etc.). Summary shows **titles**, **seasons**, **episodes**. Filter: All / Pending / Airing / Watched / Completed. Search by name or genre.

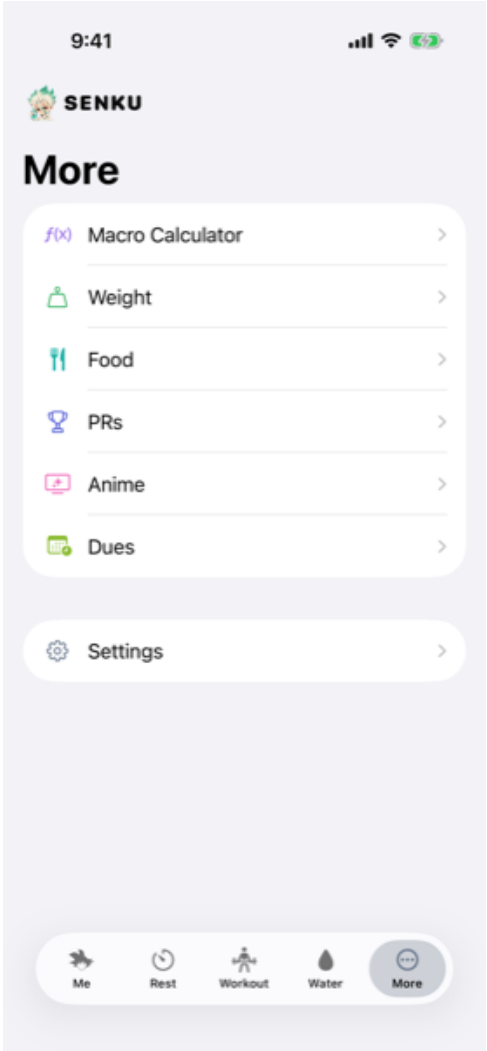

10. Dues

Monthly dues with status

Tracks recurring bills and payments. Header shows **amount left this month**. Each due: progress ring, name, category, amount, due date with countdown. Overdue items shown in red. Reminders arrive 3 days before and on the day.

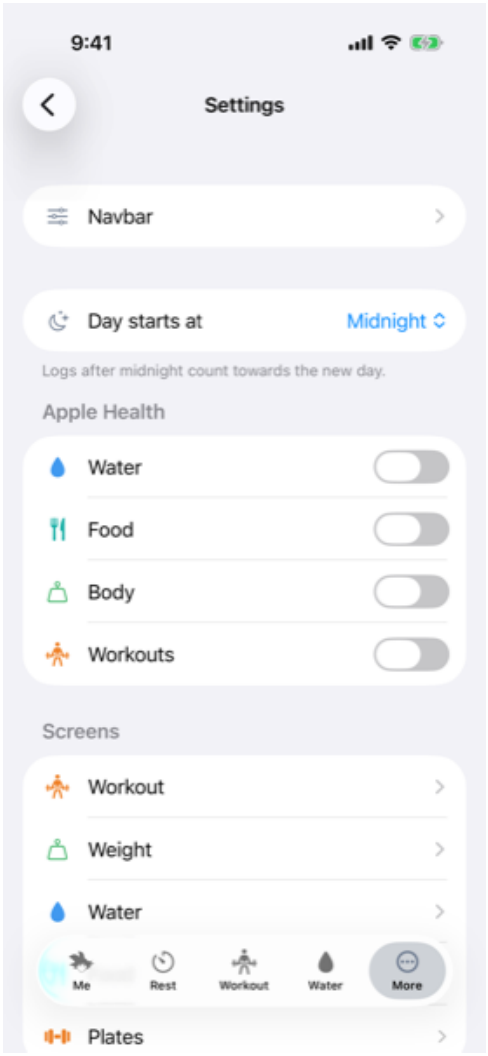

11. More

Hub for secondary screens

Hub for screens without their own tab: **Macro Calculator**, **Weight**, **Food**, **PRs**, **Watchlist**, **Dues**, and **Settings**.

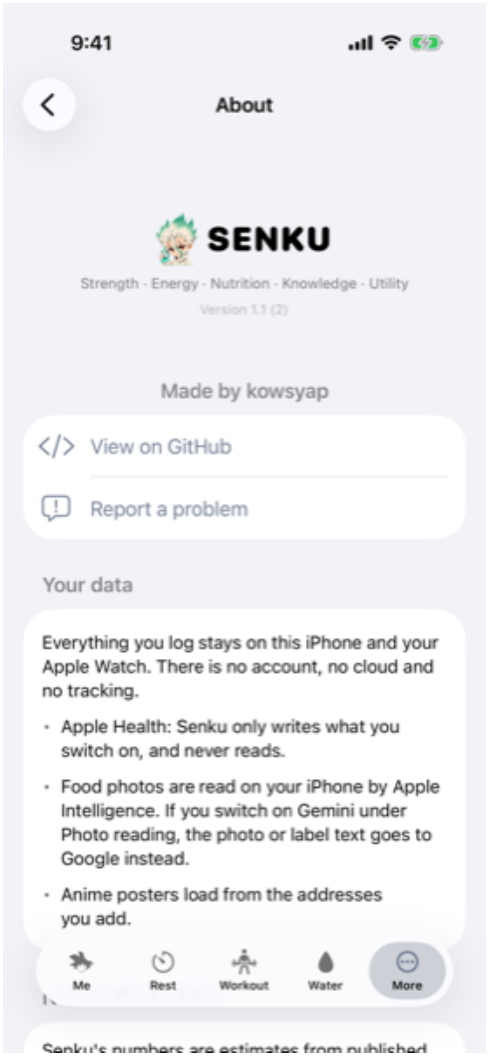

12. Settings

App configuration

Navbar — rearrange the five tabs. **Day starts at** — roll the day over at Midnight, 1 am, 2 am or 3 am (affects totals, streaks and all daily grouping; confirmation required). **Apple Health** — toggle writes for Water, Food, Body, Workouts (write-only, never reads). **Screen settings** — per-screen options for Workout, Weight, Water and Plates.

13. About

Privacy and credits

Shows version, developer (**kowsyap**), GitHub link and issue reporting.

> *Everything you log stays on this iPhone and your Apple Watch. There is no account, no cloud and no tracking.*

Apple Health: write-only. Food photos: on-device via Apple Intelligence (or Google if Gemini enabled). Watchlist posters: loaded from URLs you provide.

Tips

Weigh in first thing, before eating. **Log water** with quick-add taps. **Use the rest timer** every set. **Check the body map** after sessions. **Share PRs** — the cards look great. **Set day boundary** if you are a night owl.
